### 描述

产品介绍：Mesalamine 是一种抗炎化合物。

用途：5-氨基水杨酸是一种适用于 ELISA 分析的过氧化物酶底物。该底物生成棕色的可溶性终产物，该产物可通过分光光度法在 450nm 处读取。加入 3N NaOH 可终止反应，然后在 550nm 处进行读取。

生化机理: 5-Aminosalicylic Acid, the metabolite of sulphasalazine, has been shown to inhibit PGDH (prostaglandin 15-hydroxydehydrogenase) in human placenta and bovine lung. Further studies show that this antiinflammatory compound also inhibits leukotriene formation in human leukocytes. Additionally, 5-Aminosalicylic acid demonstrates the ability to disrupt TNF  $\alpha$  (tumor necrosis factor  $\alpha$ )-stimulated NF  $\kappa$  B (nuclear factor  $\kappa$  B) activation via inhibition of the multimeric I  $\kappa$  B kinase regulating complex.

备注: Mesalamine is an anti-inflammatory compound.
